SUBJECT: CURRENT CHANNEL ASSIGNMENTS FOR PERIPHERAL DEVICES

The following table lists the GIOC and IOM channels assigned to the various peripheral devices.

Two sets of numbers are listed under each I/O device controller. The first column of numbers is the channel number in decimal; the second column is the channel number in octal. Past references to the channel numbers have usually been decimal numbers when referring to GIOC channels and octal numbers when referring to IOM channels.

<u>Device Designation</u>	<u>GIOC_Channel</u> (decimal)	<u>GIOC_Channel</u> (octal)
Printer A	40	50
Printer B (PRT 202)	34	42
Printer B (PRT 300)	34	42
Punch	42	52
Reader A	38	46
Reader B	38	46
Tape Unit X	28	34
Tape Unit Y	28	34
Operators Console A	36	44
Operators Console B	36	44
D170 A	24	30
D170 B	30	36
D270 A	22	26
D270 B	24	30
IMP	32	40

When programming the GIOC, reference to two channels is required. The even-numbered channel is the list channel. The succeeding odd-numbered channel is the data channel. The mailbox for the list channel contains a control word (LPW) used to access data control words (DCW) which are given to the data channel in order to perform the actual data transfer. The GIOC channel numbers listed above are the list channel numbers.

<u>Device_Designation</u>	<u>IOM_Channel</u> (decimal)	<u>IOM_Channel</u> (octal)
Printer A	13	15
Printer B (PRT 202)	13	15
Printer C (PFT 300)	13	15
Punch	15	17
Reader A	14	16
Reader B	14	16
Tape Unit X	10	12
Tape Unit Y	10	12
Operators Console A	16	20
Operators Console B	16	20
D170 A	8	10
D170 B	--	--
D270 A	--	--
D270 B	8	10
IMP	19	23
