Identification

Stack Dumping in 64.5 Pseudo-processes
<stack_dump>
G. S. Stoller

Purpose

To dump the currently "good" part of the stack (i.e.,
frames which have not yet been returned from) during a
645 pseudo-process.

Use

At any point in a procedure when a stack dump is desired,
issue a

        "call   stack_dump;"

This will cause a simple dump all of the stack below the
stack-frame of <stack_dump> (i.e., there will be no breakdown
into separate frames). <stack_dump>'s output goes to
the error-file.

The attributes of <stack_dump> are SLVPRC, SLVACC.
