Identification

rdr21: The CRZ201 Card Punch Device Interface Module
J. F. Ossanna

(Note that this is an Abstract which will be replaced at a later time by a complete document.)

Function:

rdr21 is a standard I/O-System outer module implemented to drive the CRZ201 card reader. The internal element size is 972 bits; each card image occupies $26 \frac{2}{3}$ words out of 27 words. No conversion of any kind is done. (A special entry point, rdr21_update, is used as an event call entry point when attached by the Input Driver; this entry point is not intended for direct, user calls. See also BF.5.03.)

Calling Sequence:

The standard outer calls attach, detach, read, setsize, and getsize are implemented; see Section BF.1.00 for explanations and declarations.

Declaration and description of arguments:

See above.
