Identification

EPL Compiler Documentation
R. M. Graham

Purpose

The purpose of the BN section of the MSPM is to document, as completely as is possible, the <u>current</u> EPL Compiler. The BN subsections will not document how EPL should be implemented, or even how it will be implemented in the distant future, but only how it is now implemented or will be in the immediate future. Since the EPL Compiler (at least the present version) is not to be a permanent fixture, implementation techniques documented herein are not necessarily proposed as the best solutions, and are therefore not necessarily recommended.
