

Identification

Multics Segment List Entry Type Codes

Edwin W. Meyer, Jr.

Classification

Entry type codes are divided into four catagories with the following reserved codes:

<u>reserved codes</u>	<u>catagory</u>
0-19	source types (e.g., "epl", "eplbsa")
20-39	include segments and other types
	subsidiary to source (e.g., "incl.epl")
40-59	special segments (e.g., "bound", "direct_text")
60-79	names for which there are no library segments (e.g., "related", "fabricated")

Currently Defined Types

0	epl
1	eplbsa
20	incl.epl
40	bound
41	direct_text (a segment having no source)
60	related (a name attached to another name)
61	fabricated (a segment which is created via a 'fabricate' line in an MST header)
62	created (a segment which is created during the initializa- tion of Multics)
