Identification

Appendix to BX.14.01
R. H. Thomas

The following are differences between the binder described in BX.14.01 and the binder currently running under 6.36.

(1)   linkage sections are rounded to length 0 modulo 2.

(2)   definition sections are not searched for duplicate entry points or segment definitions.

(3)   No information in the symbol table header is updated as a result of binding.
