Identification

MDUMP_
D. L. Stone

(Note that the following is an Abstract, which should
be replaced by a full description at a later time.)

Function of Entry:

To write out octal dumps of segments known either
by name or by segment number onto the I∅ stream
"user_output". The information is obtained via
hcs_$ring_0_peek. Line numbers are prefixed
to each 8 word group on a single line. Lines
which contain only duplicates of the last word
of the previous line are suppressed.

Calling Sequence for Entry:

    call mdump_ (segptr, size);

Declaration of Arguments:

    dcl   segptr ptr,
           size fixed bin(17);

Description of Arguments:

    segptr is a ptr to the first word to be dumped.

    size is the number of words to be dumped.
